

Modified Dry Mixing (MDM)

a new possibility in Deep Mixing

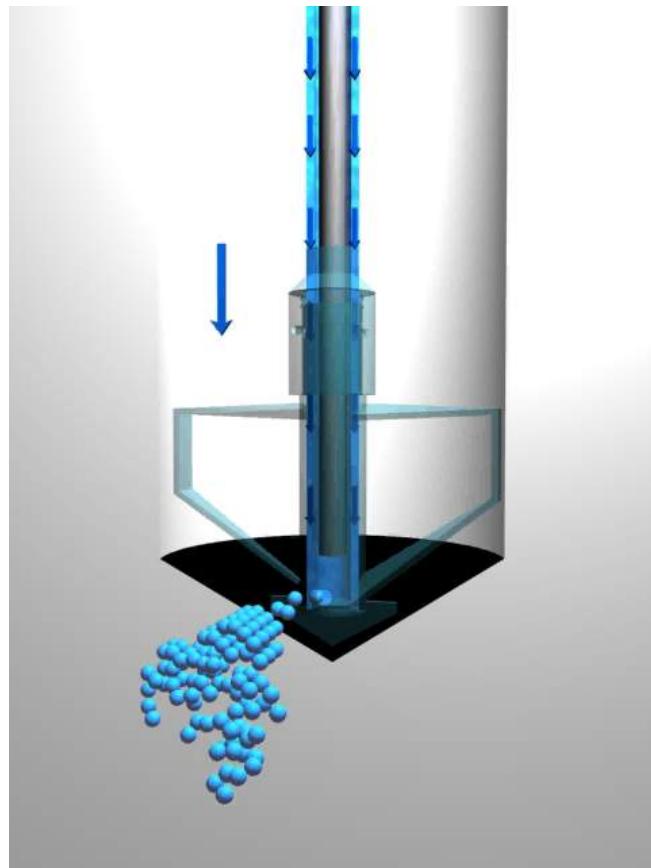

**LCTechnology
Hercules**

Structure of presentation

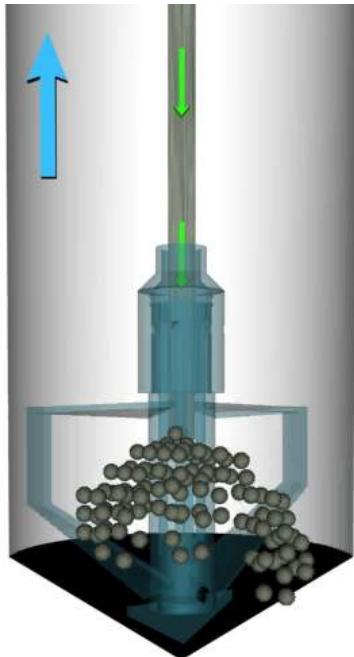

1. The MDM process
2. The MDM system – new possibilities
3. Major advantages
4. Field tests
5. QC of MDM columns
6. Applications
7. Summary of main points

The MDM Process - Penetration

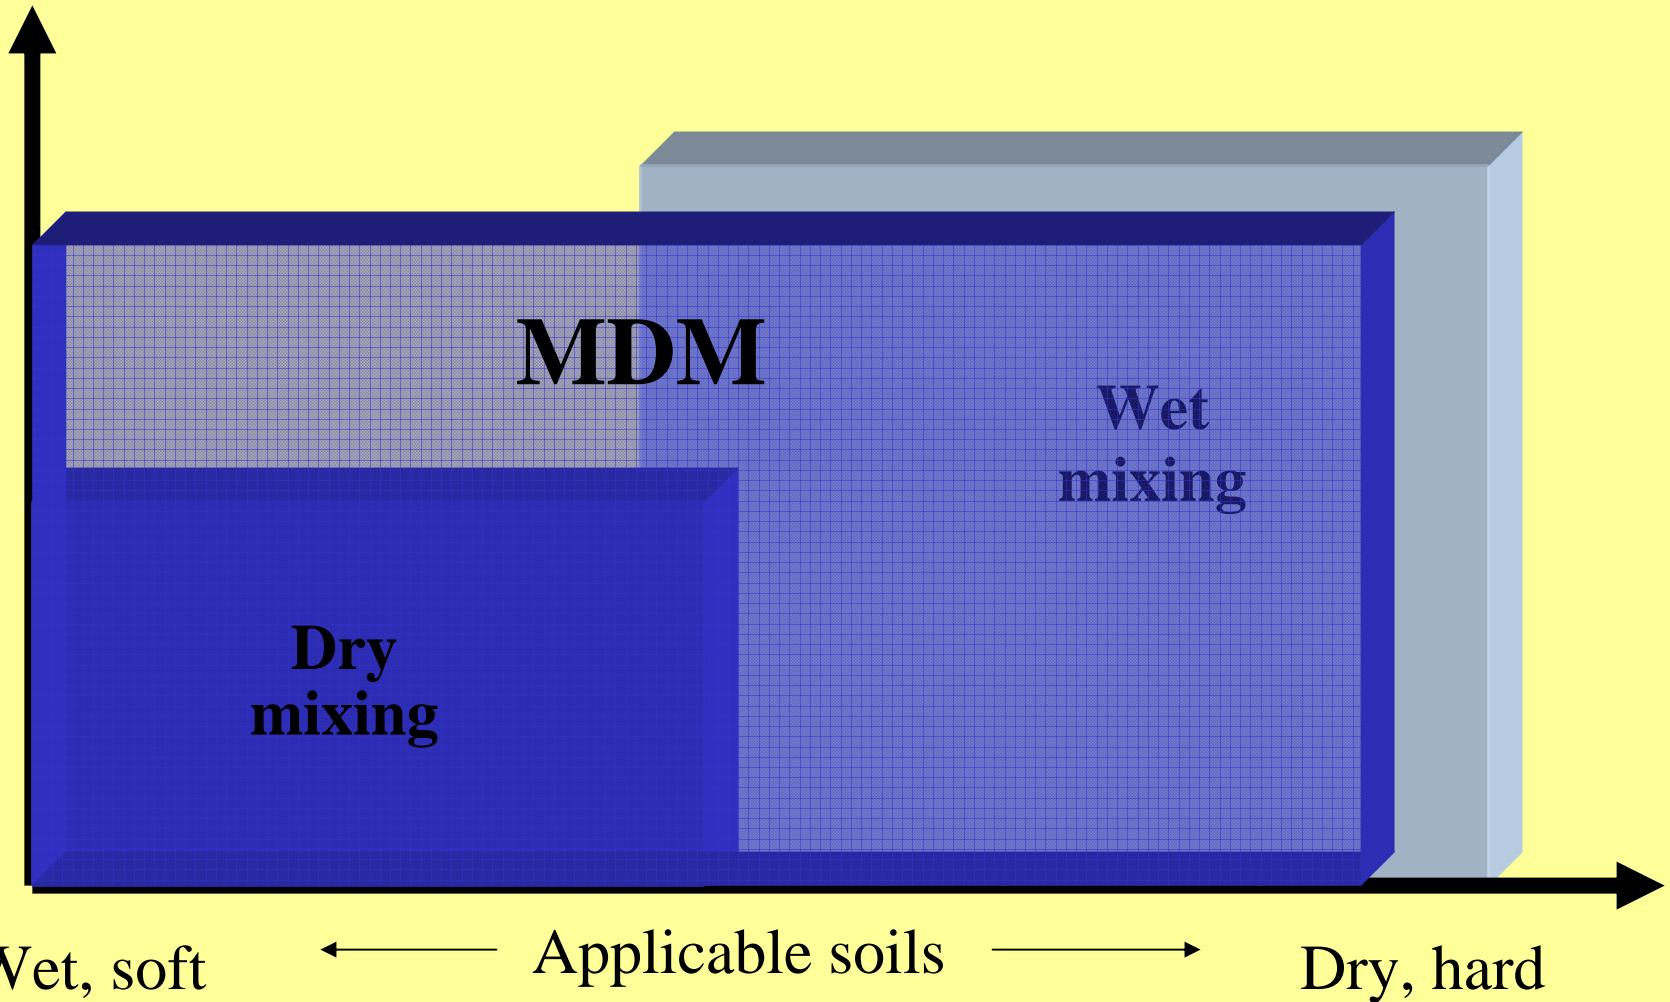

- Purpose
 - Improved mixing capabilities
 - Improved penetration capabilities
- Increased water content
 - Increased sensitivity
 - Increased liquidity index
- Fluidisation of the soil
 - Mechanical
 - Hydraulic
- Zone program
- Computer controlled
 - Water flow/pressure
 - Penetration speed

The MDM Process - Retrieval

- Purpose
 - Optimize mixing of binder
- Introduction of dry binder
- Zone program
- Computer controlled
 - Binder content
 - Mixing energy

Versatility of MDM

Deep Mixing Equipment

Wet

MDM

Dry

Major advantages

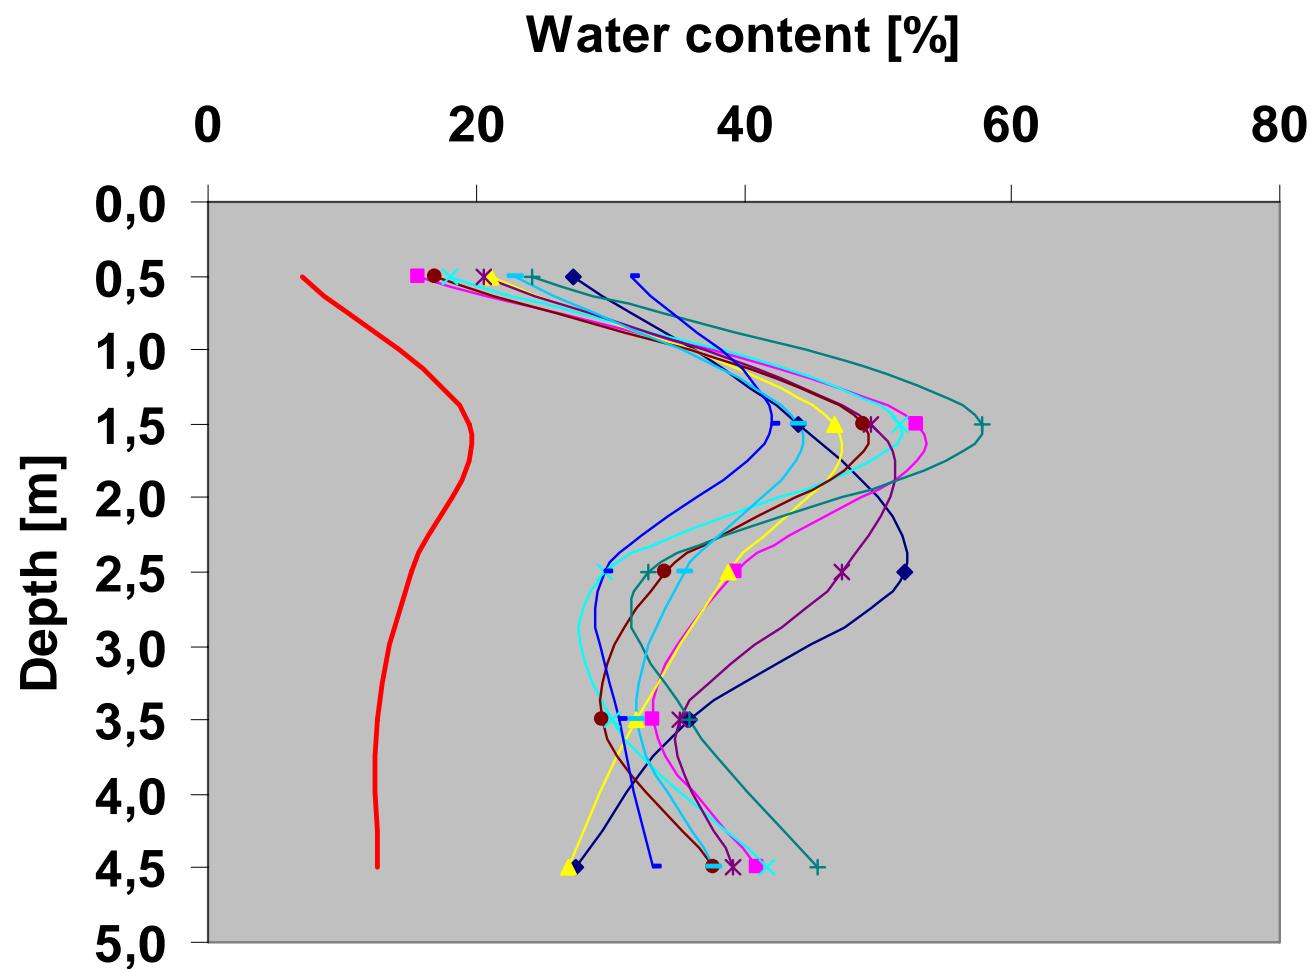

- Wide spectrum of soils
 - dry/wet
 - soft/stiff
- Tailor-made columns
 - Optimized water content
 - Optimized binder content
- No surface spoil
- Computerised process control
- Same equipment for wet & dry mixing

Field test in stiff “dry” sand, Sweden

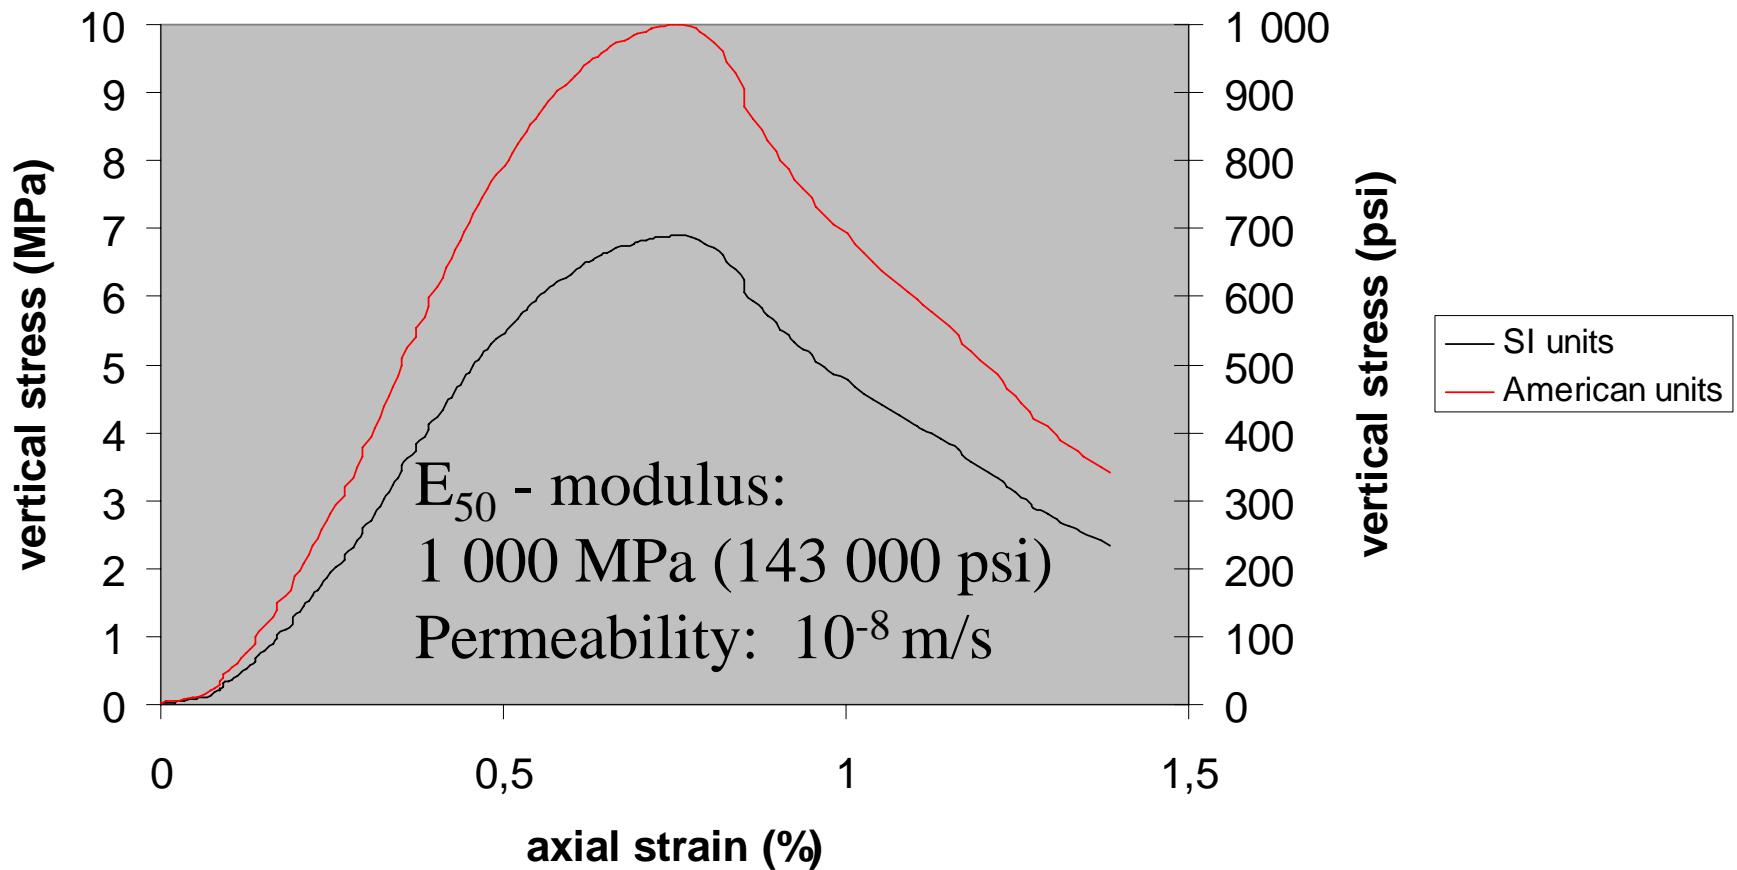

- Existing soil parameters
 - Fine to medium sand
 - q_c -value 200 – 300 tsf
 - water content 5 – 15%
- Column parameters
 - Diameter 31.5 in
 - Length 33 ft
 - Binder content 28 lb/ft³

Water content; before & after installation

Unconfined compression strength

Field test in very soft clay, Sweden

- Soil parameters
 - Very soft clay
 - Shear strength: 3–5 psi
 - Water content: 60–80%
 - Liquidity index: 0.6–1.1
- Column parameters
 - Diameter 24 in
 - Length 33 ft
 - Binder content 28 lb/ft³

Achieved results

- Improved homogeneity
 - Compared to dry mixing
- Coefficient of variation
 - 15 to 30%
- Compressive strength:
 - $q=834$ psi

Field test in September 2004 – very soft clay

- Purpose
 - Behaviour of two test embankments
 - Design column strength
 - Comparison between Dry mixing & MDM regarding behaviour & cost efficiency
 - Mixing tool evaluations
- Performed in conjunction with Swedish Road Authority
- Control objectives
 - Settlement
 - Strength
 - UCS
 - CD Triaxial
 - CU Triaxial
 - Variation of strength
 - Pore pressure
 - Chemical analysis (Ca)
 - Behaviour of geogrid (load transfer platform)

QC of MDM – columns

- Core sampling
- Load testing
- Pressure meter
- ICT® (Instant Core Testing, under development)
- Detailed recording of column properties

Applications

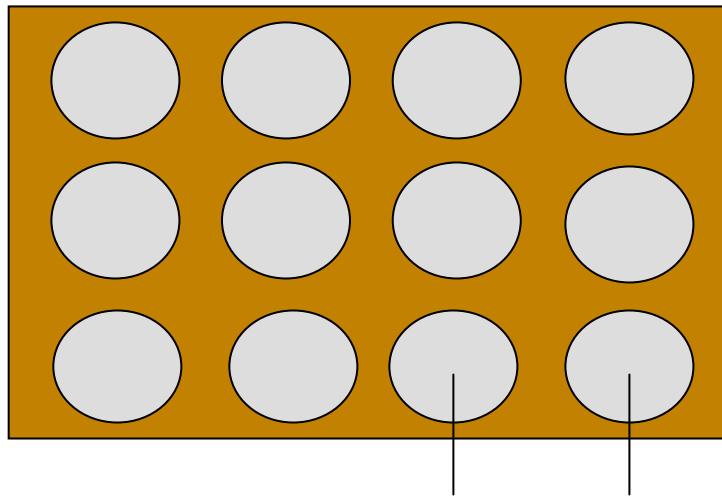

- Embankments
- Levee walls
- Foundation
- Retaining walls
- Cut – off walls

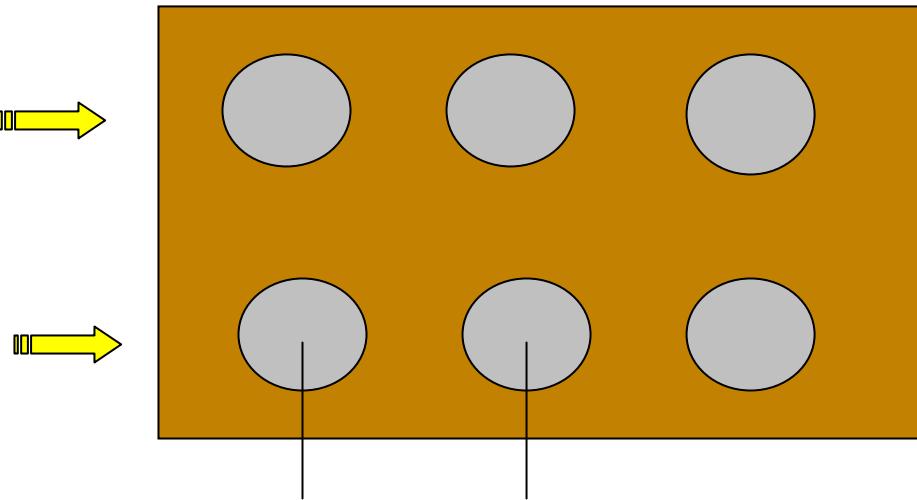

Modified Dry Mixing™

Differences in design compared to dry mixing for embankments:

Standard Dry Mix

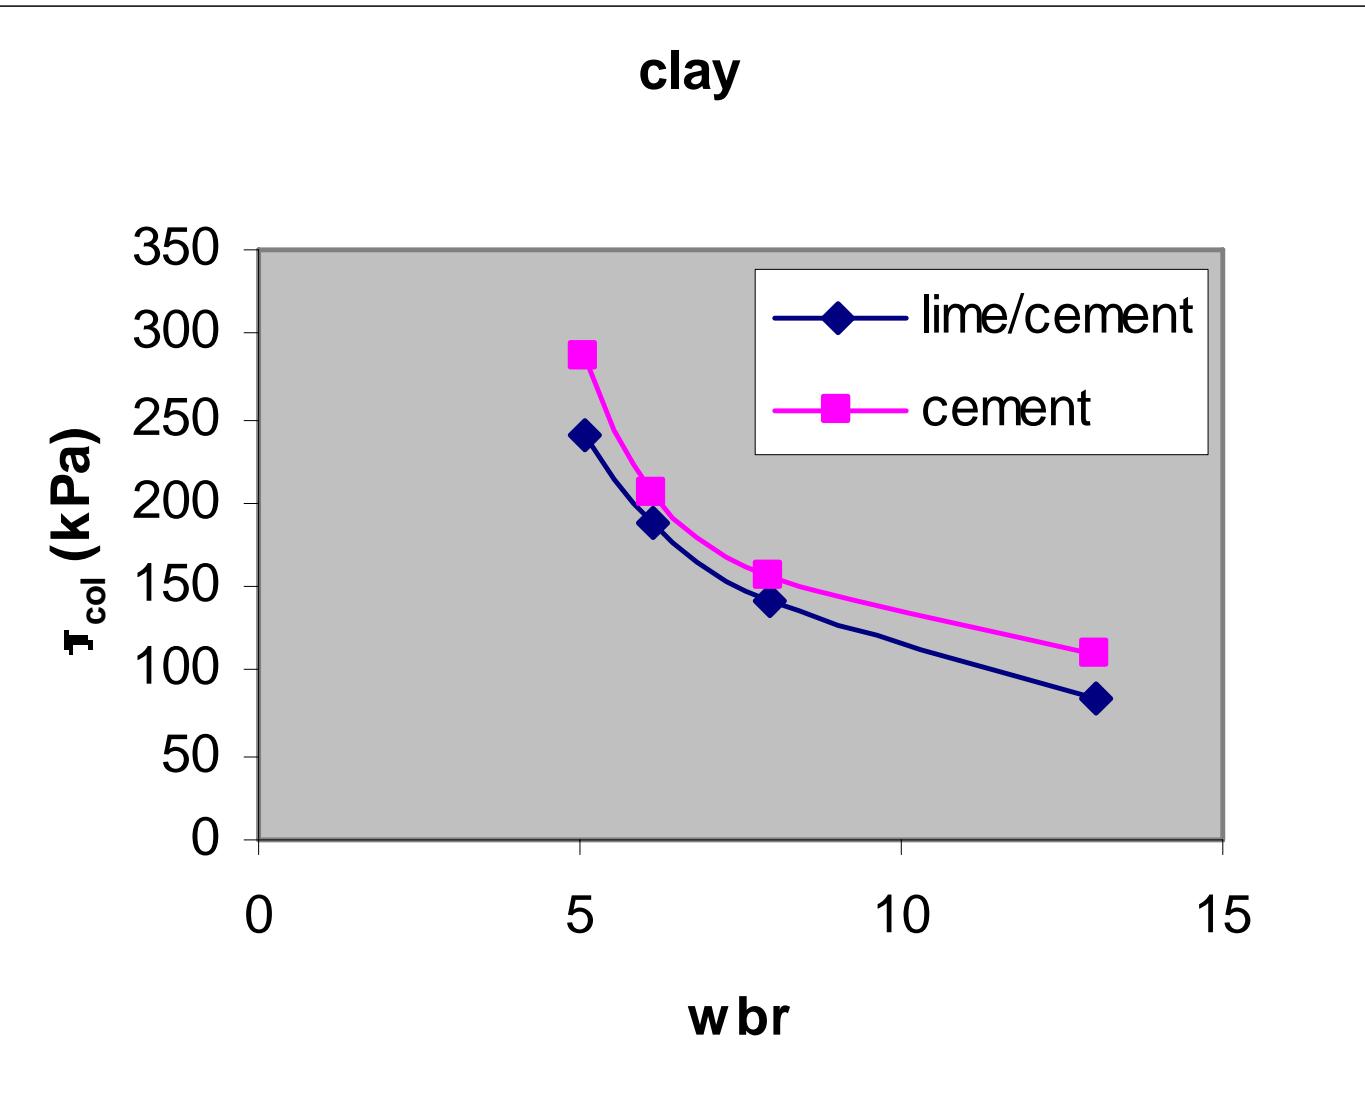

Modified Dry Method™

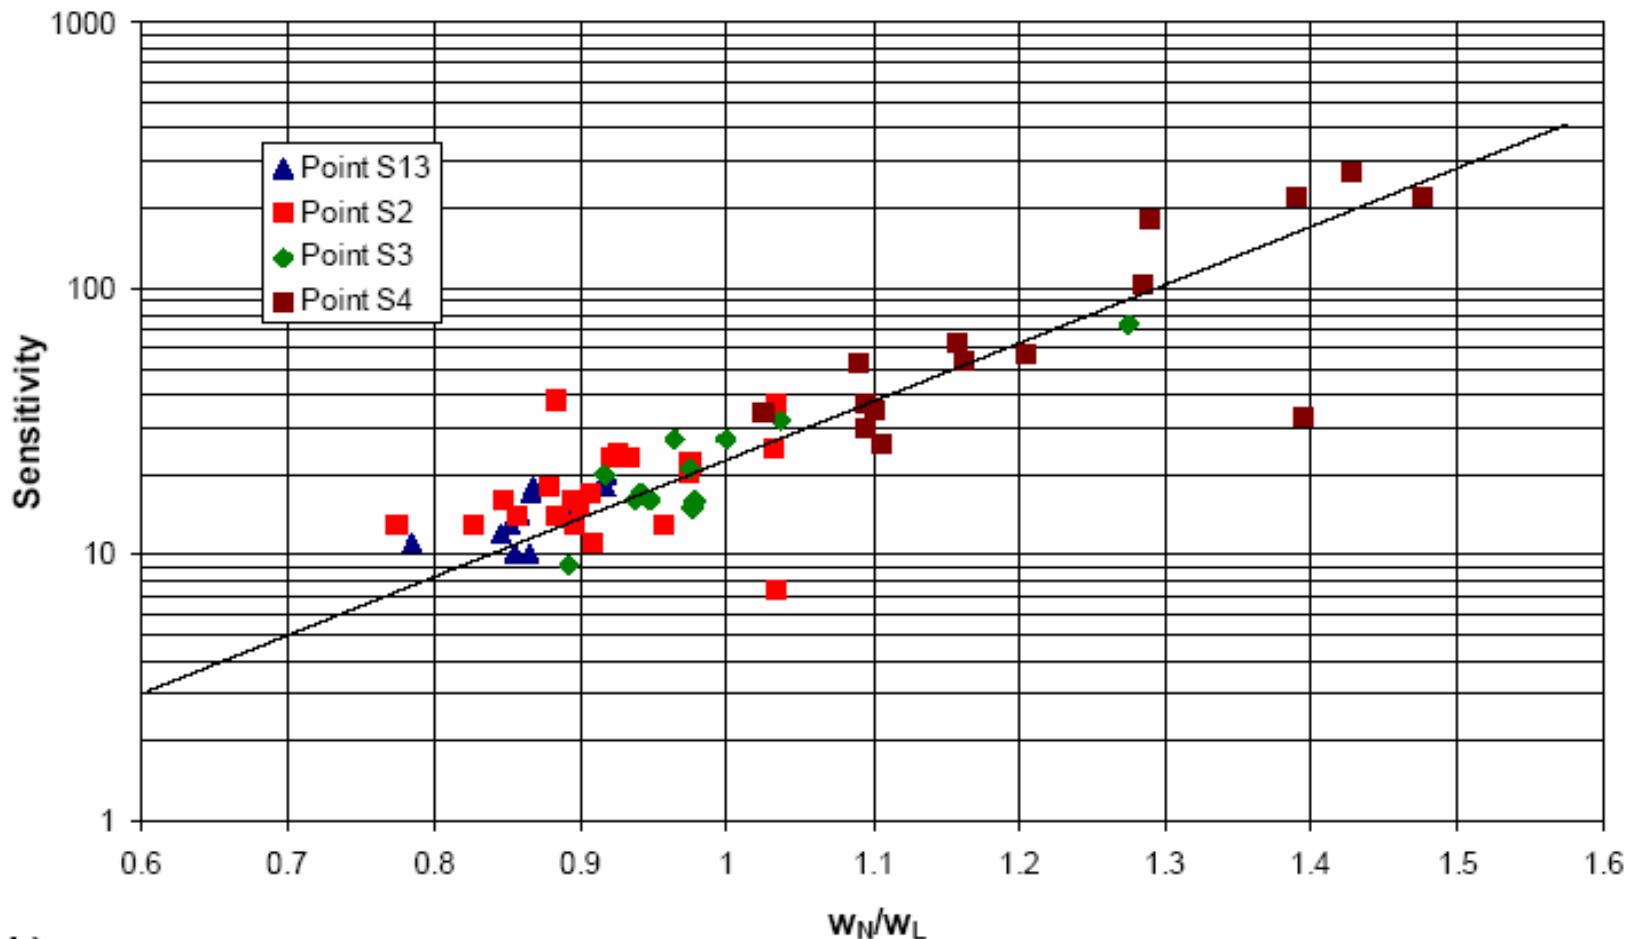

- Increase column c.c. with MDM™ and reduce # of columns needed for a given load.
- Reduces installation time and overall project cost.

Strength vs water cement ratio

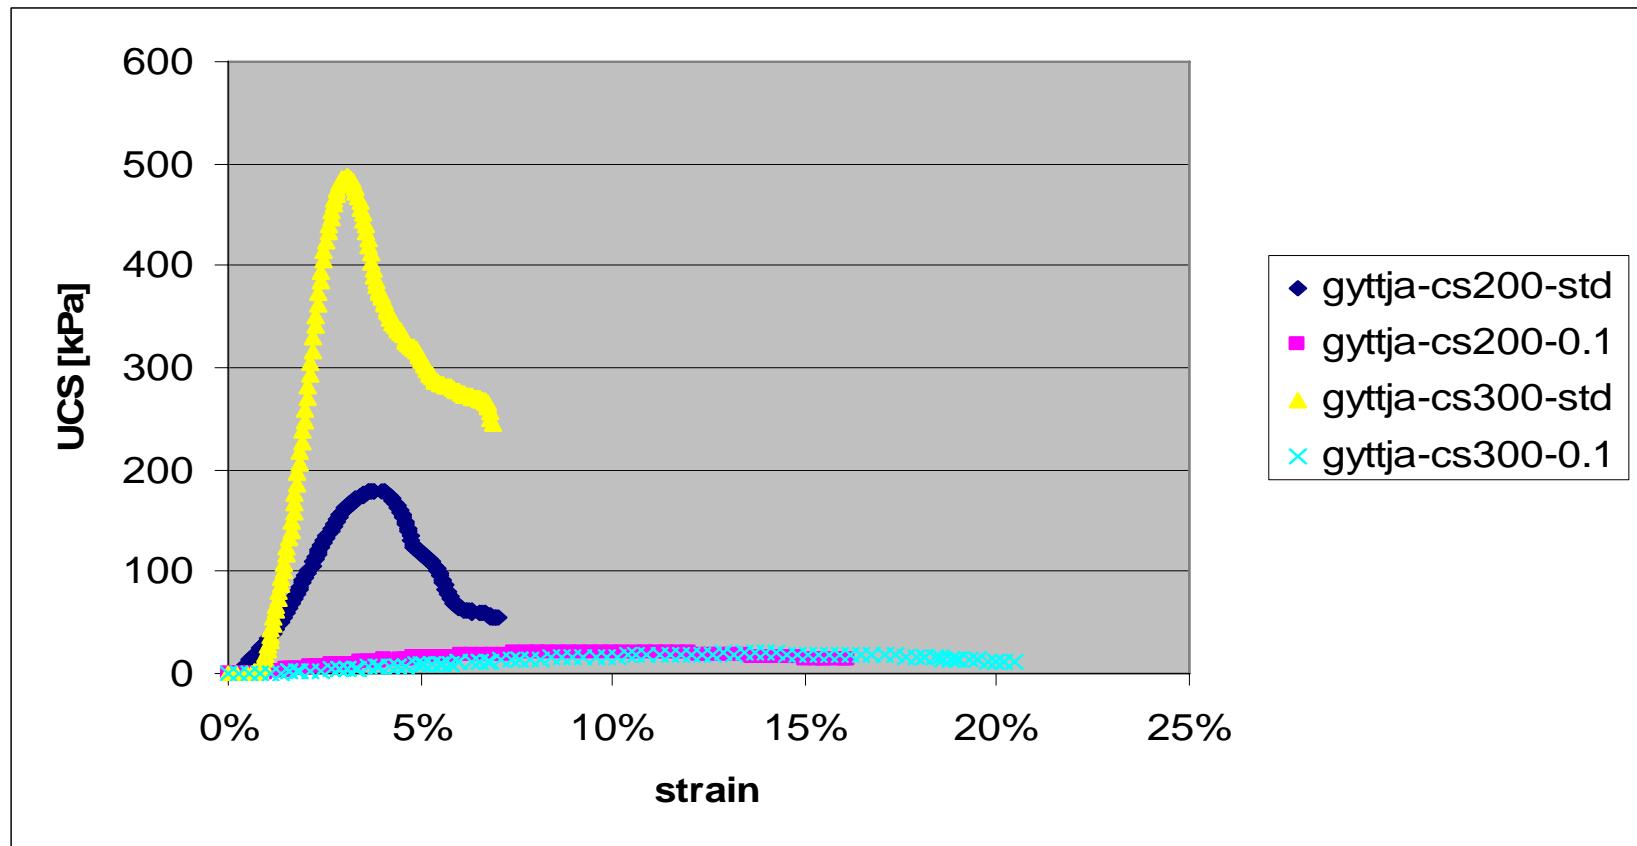

Sensitivity vs “liquidity index”

b)

Effect of mixing energy

Eurocode – Deep Mixing

EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

DRAFT
prEN 14679

April 2003

ICS

English version

Execution of special geotechnical works - Deep mixing

Exécution de travaux géotechniques spéciaux - Colonnes de sol traité

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 288.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alterations.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.
